

ESL-4 (SS316) Slotted Cable Hanger

PFS SLOTTED CABLE
HANGERS ARE STUD
WELDED TO ACHIEVE A
360° COMPLETE FUSION.

***Note:**

PFS Slotted Cable Hangers (ESL's) and Pneumatic Tube Supports (SLP's) are manufactured using the stud welding method to connect the 3/8 tapped ferrule to the slotted plate. Stud welding provides a high quality fusion weld where the weld is stronger than the stud itself. PFS Slotted Cable Hangers will accept extreme torque requirements and is approved to US Navy shock and vibration standards.
